

## RISHI CAST PVT. LTD. - Estb. 1991

Rishi Cast Pvt. Ltd. is an ISO 9001:2008 and NABCB QM027 Certified company

"RISHI CAST" is the only company in INDIA which makes Stainless Steel investment Casted Extension Nipple.

### RISHI Brand Stainless Steel Extension Nipple

1. Rishi Extension Nipple contains stainless steel material which does not rust.
2. Stainless Steel has very high load capacity and therefore can be made lighter than ordinary brass nipple and serves two purposes at the same time.
  - a. Less use of Material and hence economical
  - b. Inside cross-section area is bigger and therefore pressurised flow of water.
3. Brass nipple is made from casted rod which is made from low graded cast material and therefore it is brittle in nature and easily breaks even when plumber tries to tighten it while stainless steel is casted by investment casting process and stainless steel can take more load and is practically unbreakable.
4. Brass Nipple can be made with high load capacity and strength by making it heavy but since the outer diameter is fixed, inside cross section is reduced to make it more durable and this results in less pressurised flow.
5. Rishi Extension nipple has Allen-key part in all sizes (i.e., 1", 1.5", 2", 2.5", 3", 4", 5", 6") whereas brass nipple has allenkey only up to 3 inch size (i.e., 1", 1.5", 2", 2.5", 3").
6. Each Rishi extension Nipple is CNC threaded and highly accurate to provide leak proof solution for extension. Brass nipples are threaded by conventional lathes and are less accurate for threads and therefore are always vulnerable to leakage.
7. Rishi Extension nipple comes with life time piece to piece replacement guarantee.
